# Using the Scanner

## Beeper Indication

---

Beeps	Indication
3 beeps in a series from low to high pitch	Power up
1 short beep	A barcode has been successfully decoded
2 short beeps	The scanner has entered program mode
1 long beep	A setting has been programmed
3 beeps in a series from low to high pitch	The scanner has exited program mode
3 short beeps	Error setting the scanner

# Settings and Programming

Scan selected barcodes in this manual to affect setup and programming of your handheld imaging barcode scanner. Decoding options and interface protocols can be tailored to a specific application.

Setup parameters are stored in non-volatile memory in the scanner and are retained even when power is off. Setup parameters change only when you reset them. You may need to hide adjacent code patches with your hand when scanning.

## ***Program Set Up Flow***

Scan "Set" to set up --> Scan selected barcode --> Scan "End" to confirm the setup.

## ***Suffix Set Up Flow***

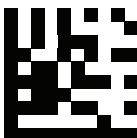

1. Scan Set.
2. Enable barcode type.
3. Scan suffix you would like to add characters within ASCII Table. Up to 4 digits can be added.
4. Scan End.

Ex. If we wish to add “36” as suffix for all barcode type, then follow procedure as below. Scan [Set] to enter setup. Then we select barcode by scanning [Enable All], then we scan [3] as 3 of ASCII HEX and [6] as 6.

- One Discrete Length

Select this option to decode the symbol containing a selected length.  
Select the length using the numeric bar codes in ASCII Code Table.

Example 1:

To decode Interleaved 2 of 5 symbols with 8 characters:

- a. scan Set to set up
- b. scan Interleaved 2 of 5 One Discrete Length
- c. scan 8 in ASCII Code Table
- d. scan End to confirm the setup

Example 2:

To decode Interleaved 2 of 5 symbols with 12 characters:

- a. scan Set to set up
- b. scan Interleaved 2 of 5 One Discrete Length
- c. scan scan 1 followed by 2 in ASCII Code Table
- d. scan End to confirm the setup

- Two Discrete Lengths

Select this option to decode the symbol containing either of two selected lengths.  
Select lengths using the numeric bar codes in ASCII Code Table.

Example:

To decode Code 128 symbols containing either 8 or 14 characters

- a. scan Set to set up
- b. scan Code 128 Two Discrete Length
- c. scan 0, 8, 1, and then 4 in ASCII Code Table
- d. scan End to confirm the setup

- Length Within Range

Select this option to decode the symbol with a specific length range.  
Select lengths using numeric bar codes in ASCII Code Table.

Example:

To decode Codabar symbols containing between 7 and 8 characters,

- a. scan Set to set up
- b. scan Codabar Length Within Range
- c. scan 0, 7, 0, and then 8 in ASCII Code Table
- d. scan End to confirm the setup

# JavaPOS Driver V2.00 for Win32/Win64

## ***JavaPOS Version***

Our JavaPOS driver now is compatible with JavaPOS1.7.

## ***Install the Java2 Runtime Environment***

The JRE is Java's virtual machine that allows for applications to run on the host computer. To be able to run the JavaPOS application, you need a 1.7 version JRE. Ignore the following steps if you already have a JavaPOS1.7 or a later version in your host computer.

- Go to <http://java.sun.com>, and select this version of Java Runtime Environment.
- Install the program following the instructions.

## ***Install the Service Object and JavaPOS files***

In the “\Driver” folder, there are two files: ZbtJavapos.jar and jpos.xml. Please include ZbtJavapos.jar at your CLASSPATH and also copy the related “JPosEntry” option from the jpos.xml to your application’s jpos.xml.

## ***How to use RS232 scanner with JavaPOS Driver***

Install the Java RXTXcomm API

In the \RXTXcomm folder, there are four files: rtxSerial.dll , rtxParallel.dll, and RXTXcomm.jar. Please do the following steps to install the library.

1. Copy rtxSerial.dll and rtxParallel.dll to C:\Windows\system32.
2. Copy RXTXcomm.jar to your <JRE Install Folder>\lib directory.

Disable (Default)

Enable

***Use barcodes to configure the Handheld scanner***

JavaPOS configuration barcodes:

End of Configuration

## **Running the JavaPOS Test utility**

Please run the test application POStest.sh to evaluate your installation.

## **How to use JavaPOS driver at your application**

1. Add “ZbtJavaPos.jar” from the “\Driver” folder to the CLASSPATH and copy the related “JPosEntry” option from the “**jpos.xml**”.
2. Modify the jpos.xml based on your COM Port
3. Example of jpos.xml file content

## Multi-Barcode

The Multi-barcode feature provides the order in which users set up barcode data transfer. Even if the user does not scan the barcode in the correct order, the scanner transmits the data correctly in a pre-programmed order. Users can set up to 6 barcode sequences. The 4 parameters of the program design are: barcode type, barcode length, check rule, separator. Examples of instructions and settings are as follows.

Barcode length	If the barcode length is not required, it is set to "0"
First digit	Set to " NUL " is the first number that does not need to check
Separator	Set to " NUL " is not required separator

A set of dedicated QR code can be generated according to the following rules.

Period No	Note	example
1~2	Dedicated instructions	~ZQS.RL8DM59
3	Multi-Barcode Enable/Disable	0:Disable 1:Enable
4	separator,use ascii code decimal representation	0 for NUL, Please refer to ASCII code for the other, for instance 43 for +, 126 for ~
5	Reserved	0
